Aaron Steele

Business Analyst | ERP and complex business systems

Adelaide, South Australia | 0423 153 935 | steele.aaron@outlook.com | aaronsteele.vercel.app

PROFILE

Business analyst since 2015 and builder since 2016. I take requirements that arrive incomplete, investigate what already exists, and turn them into designs that both the customer and the developers sign off before anything is built: process flows in BPMN 2.0, screens in Figma, business rules, edge cases, acceptance criteria and end-to-end test flows. I use Claude Code to read source code, explore alternatives and generate test scenarios, and I make it prove its work against something it does not control.

HOW I WORK

- **Investigate before designing:** I read the existing system, code and data before proposing a change.
- **Make it tangible:** BPMN 2.0 process flows, Figma wireframes and screen designs, rules, permissions and acceptance criteria, before build.
- **Invite the challenge:** I run a separate review whose only job is to break the design, and I change it when the review is right.
- **Think about testing while designing:** end-to-end test flows are part of the design, not an afterthought.
- **Leave it documented:** help and training material that explains when and why to use a feature, not just what it does.

EXPERIENCE

AI and Automation Consultant, Independent — 2016 to now

- Technical lead rescuing a national charity's stalled HubSpot migration. Found donors had been merged on email address instead of the old system's account number, putting donation totals out by **$3.8 million**. Rebuilt **1,019 organisations, 19,350 contacts and 37,729 donations** on the right key, reconciled them to the charity's books, and integrated Stripe and Xero so it stays right. Two rounds of testing with the charity before go-live.
- Security and quality review of a live, largely AI-written commerce platform: proved each gap by reproducing it, retested after fixes, and showed one tool-reported issue was a false alarm.
- Designed and built Chasem (chasem.app), a quoting and invoice-chasing app for Australian tradespeople, plus two public tools: Rain Check and Doorknock (TypeScript, serverless, MCP, HubSpot API).

Senior Business Analyst and Architect, BHP — 2022 to now

- Business analysis and solution architecture on critical-infrastructure systems.
- Mentor the junior business analyst team.

Lead Business Analyst, City of Marion — 2021 to 2022

- Led analysis for a council-wide asset management platform.

Business Analyst, SA Police — 2020 to 2021

- Project Shield: replacing the core systems frontline officers use, with requirements from operational, technical and records stakeholders.

Technology Lead, Vocational Education Strategy, SA Department for Education — 2020

- Led the technology side of the state's vocational education and training strategy.

Business Analyst, Services Australia 2018 to 2020

- National Redress Scheme: turned legislation into the rules the system uses to decide who qualifies, written so the people accountable for those decisions could read and check them.
- Veterans' entitlements.

Consultant, DVE Business Solutions 2018

- CRM and ERP rollouts for universities.

Business Analyst, Australian Institute of Business; Department of Industry 2015 to 2018

- Delivered a new student CRM at the Australian Institute of Business; network reform at a federal department.

SYSTEMS AND METHODS

Figma, BPMN 2.0, Claude Code, ChatGPT, HubSpot, Salesforce, Zoho, Microsoft Dynamics, Azure DevOps, Zapier, Make, n8n, Xero, Stripe, TypeScript, MCP

EDUCATION

Master of Public Administration (Management), Flinders University 2011 to 2012

Bachelor of Arts, Flinders University 2008 to 2010

Certifications and clearance: TOGAF certified | Baseline security clearance
