Registered & Allocated Work: Feasibility Study & Plan

Pay-to-win, low/no-bid income streams to build in 2027 and carry through a full-time helicopter CPL from early 2028

Compiled 3 November 2026

✅ verified · (est.) estimate · ❓ not found. Verify prices, rates and rules before committing.

Contents

1. Part 1: Master Summary (funding decision, roadmap, earnings, auditor probation, master ranking)
2. Part 2: RTO Work Plan
3. Part 3: Registered-Work Options (expert networks, tribunals, committees and others)
4. Part 4: Auditor and Mediator Options (ISO, NDIS, AMDRAS)
5. Part 5: IRAP, Scheme Auditors, SA Planning Panels, Privacy
6. Part 6: Construction Adjudicator and SMB1001
7. Part 7: Gateway Reviewer, Greenhouse Auditor, BARS
8. Appendix A: Original Brief, Radio, Pipeline and CPL Funding
9. Appendix B: Outreach and LinkedIn Text
10. Appendix C: Sample Assessment Tool (BSBPMG536)

Part 1: Master Summary

Feasibility study compiled 3 November 2026. Figures marked ✅ were verified from official or primary sources during research; figures marked (est.) are estimates; ❓ means not found. Check all prices, rates and rules before committing money.

The brief

- **Pay-to-win, low or no bid:** pay for a qualification or accreditation, get registered or onto a panel, and get **allocated** work without pitching or bidding for each job.
- Mostly remote or scheduled work that **fits around a full-time integrated helicopter CPL** starting **early 2028** at Parafield.
- **2027** is for building savings and side income alongside the current day job.
- **Background:** BA, Master of Public Administration, business analyst and solutions architect, with industrial-site experience (Olympic Dam critical-comms migration). Scottish-born grandmother.

Funding decision (divorce settlement)

Fund two paths now:

Path	What to buy	Cost (est.)	Why
1. ISO lead auditor stack (the main bet)	ISO 9001 lead auditor, then ISO 27001, then ISO 42001, plus professional indemnity insurance	about $8–11k	Compliance law guarantees the demand and certification bodies schedule the audits. It unlocks NDIS, the heavy-vehicle scheme (HVA), greenhouse auditing and IRAP (27001 counts as IRAP's Category B). 42001 is a new AI standard with few auditors
2. RTO stack (quick cash)	TAE40122 plus RPL of the project management, business and IT diplomas	about $6–10k	The fastest earner: assessment writing can start before the TAE is finished, and RPL pays $100–150/hr ✅ once qualified. Remote and flexible, so it works during the CPL

Free, so run in parallel: expert networks; Gateway reviewer registration (NSW, WA, QLD, and SA if a pool exists); tribunal expressions of interest.

Fund later from earnings: AMDRAS mediator accreditation (about $3–5k, a step towards the tribunal), IAPP AIGP, greenhouse auditor training, ISO 14064.

Keep the CPL money separate: about $10k for the tuition gap and extras, plus 3–6 months of living costs. Don't touch it for any of the above.

Check before spending:

1. Which TAE credential and which providers your target RTOs accept.
2. Whether 2–3 certification bodies take probationary auditors, and which standard they're short of auditors in.

2027 roadmap

When	Actions
Jan–Feb 2027	Enrol in the TAE and RPL. Book the 9001 lead auditor course. Register for expert networks and Gateway. Register as an IRCA Associate Auditor or with Exemplar
Mar–Jun	Start assessment-writing work, then RPL assessing. Internal audits at work, plus outsourced internal audits. Apply to certification bodies for trainee intake. Book the 27001 course
Jul–Dec	Trainee audits, then your witnessed audit, then the Auditor grade, then probationary paid audit days. ISMS trainee audits. 42001 course. Fund mediator accreditation from income
Early 2028	Integrated CPL(H) at Parafield. RTO work plus occasional audits continue

Expected earnings by the start of the CPL (est.)

	Low	Middle	High
RTO	$300–600/wk	$800–1,300/wk	$1,500–2,200/wk
ISO auditing	$0–100/wk	$200–500/wk	$600–900/wk
Combined	**$300–700/wk**	**$1,000–1,800/wk**	**$2,100–3,100/wk**

- **What limits 2027:** the day job leaves about 8–12 hours a week, and audits happen on weekdays.
- **During the CPL:** about $800–1,500/wk, mostly from RTO work.
- **Payback on the $14–21k spend:** about 4–8 months of steady earning in the middle case.
- **The bigger money comes after the CPL:** auditor grades, 27001 and 42001, Gateway, the tribunal.

The auditor probation period: what's required and how to meet it

There are **two separate requirements**.

A. Your personal certification (CQI/IRCA or Exemplar Global)

IRCA grade	Requirement (check the current IRCA rules)
Associate Auditor	Passed an IRCA-certified course, without enough audit experience yet. This is where you start. (The Provisional grade no longer takes new applicants ✅)

IRCA grade	Requirement (check the current IRCA rules)
Auditor	✅ At least 4 management-system audits covering the full audit cycle, and at least 20 audit days. An older source says at least 10 on site, within 3 years
Lead Auditor	✅ Everything for Auditor, plus at least 3 audits as lead and at least 15 days as lead. One guide says 7 audits and 35 days in total, so check

Exemplar Global has similar grades (provisional, auditor, lead), with a qualification-based or competency-based route. You apply through Exemplar Community, do a work-style assessment, and recertify every 3 years.

B. The certification body's own qualification (ISO/IEC 17021-1, clause 7.2.4) ✅

- A **witnessed audit is mandatory**: a competent evaluator must watch you conduct an audit.
- Training on the body's own procedures, plus ongoing monitoring.
- **For ISO 27001 ✅**: you must have been an auditor-in-training on at least one initial or recertification audit and at least one surveillance audit, supervised by an evaluator.
- Grades run probationary or trainee, then auditor, then lead, with a day rate by grade. Trainee days are often unpaid or reduced (est.). Changing bodies may mean another witnessed audit.

How to build the audit days

1. **Internal audits at your current job.** These happen on work time, which solves the weekday problem. Check whether your target grade counts internal audits.
2. **Paid outsourced internal audits for small certified companies.** Clause 9.2 of the standards requires annual internal audits, and many small firms outsource them.
3. **Supplier audits** at work.
4. **Trainee or observer intake** at 3–5 certification bodies (Bureau Veritas, BSI, SAI, LRQA, DEKRA). Ask which standard they're short of auditors in.
5. **Keep an audit log from day one:** date, organisation, standard, scope, role, days, and a verifier's signature.

Master ranking of every option researched

Tier	Option	Status
Fund now	ISO lead auditor stack (9001, 27001, 42001)	Main bet
Fund now	RTO: TAE plus RPL diplomas, RPL assessing, validation, writing assessments	Quick cash
Free, start now	Expert networks (~US$100–700/hr reported)	Bonus income
Free, start 2027	Gateway and assurance reviewer (NSW Expert Reviewer Panel ✅, WA ✅, QLD)	Near-top fit
Free, apply in rounds	ART sessional member ✅ $1,078/day general, $1,700/day senior	Top-paying long shot
Later from earnings	AMDRAS mediator (court panels ✅ $1,500–1,800/matter)	Tribunal ladder

Tier	Option	Status
Later	NDIS auditor, HVA auditor, ISO 14064 / NGER Category 2, IAPP AIGP	Add-ons to the auditor stack
Long term	IRAP (5 years ICT incl. 2 in infosec, CISSP or CISM, NV1, $7,290 course ✅)	The top tier, around 2029–30
Long term	Construction adjudicator (QLD: 559 applications shared by 134 adjudicators ✅)	Rung after mediation
Long term	BARS aviation auditor (needs experienced flight-operations credentials)	After the CPL, around 2030
Small or ladder	Council audit and risk committees (✅ $350–450/meeting), lay panel member	Credibility
Check eligibility	SA council assessment panels (✅ $400–550/meeting, needs Planning Level 2)	Probably blocked
Dropped or parked	NatHERS desktop (offshored at AU$10–12/hr), grant panels, SMB1001, UK end-point assessment (needs UK right to work), food safety auditor, probity, bug bounties, kit selling	Not pursued

Part 2: RTO Work Plan → $1k+/week

Goal: Get onto contractor pools where work is allocated to you (no bidding or pitching), paid per piece, mostly remote. Stack several fields and several providers so the work stays steady.

Background: BA (Bachelor of Arts), MPA, working as a business analyst / solutions architect, with industrial-site experience (Olympic Dam critical-comms migration). Helicopter CPL planned.

> Rates and timelines marked *(est.)* are estimates. Very little per-piece pay data is published. Check them against real quotes before committing money.

1. How the work flows

RTOs (Registered Training Organisations) keep pools of contract assessors, validators and resource writers. Once you're on their books, they allocate work to you. You don't bid for each job.

The rule that decides everything: to assess a qualification you need

1. a TAE credential (TAE40122 Cert IV in Training and Assessment, or whatever the RTO currently accepts; the rules changed in 2025),
2. the qualification you're assessing, at or above that level, and
3. **current industry experience** in that field.

The assessment decision must be yours. Claude can draft and organise, but you assess and sign.

2. Work you can do before the TAE is complete

Work	TAE needed?	Notes
Assessment tool development (writing tasks, marking guides, mapping)	Generally no. The RTO validates it before use	**Fastest money.** Sell to RTOs and resource-development companies. Claude drafts, you review
RPL evidence and mapping support (organising candidate portfolios against units)	No, if you're not making the decision	Admin and support role. Less common as paid contract work
Industry expert on a validation panel	Often no. The panel as a whole needs the TAE, you supply industry currency	Confirm under the 2025 standards with each RTO
Assessing under supervision while completing the TAE	Possibly. Rules allow limited supervised arrangements	Ask RTOs whether they offer this under the current standards. Don't assume it
Assessing (making decisions), independent validation	**Yes**	Wait until you're qualified

Bottom line: start assessment tool development in week 2–4, and treat the rest as a bonus if an RTO offers it.

3. Fields to stack

RPL these yourself from your work history

Your degrees count as supporting evidence. Your BA and architect work is the main evidence. University subjects don't credit directly to VET units.

Qualification	Likelihood	Notes
BSB50820 Diploma of Project Management	**Likely**	Industrial projects strengthen it
BSB50120 Diploma of Business	**Likely**	Flexible electives
ICT50220 Diploma of Information Technology	**Likely**	Choose the specialisation closest to your work. High assessor demand
BSB60720 Adv. Diploma of Program Management	Possible	If you've worked across several linked projects
BSB50420 Diploma of Leadership & Management	Possible	Needs evidence of leading people
BSB60420 Adv. Diploma of Leadership & Management	Possible	Same, at a more senior level
ICT60220 Adv. Diploma of IT	Possible	Architecture-level work could fit
Diploma of Government (PSP)	Weak unless you have public-sector work	MPA helps the knowledge side only
Diploma of WHS	Not yet	Build WHS experience first. Site experience may cover some units
RII (resources operations)	Unlikely	Needs operational or supervisory site roles

Check current codes on training.gov.au before enrolling. Packages get updated.

Fields to build over time

- **Diploma of WHS:** high, regulation-driven demand and lots of RPL. Build experience through your work.
- **TAE50122 Diploma of VET:** lets you validate more widely and eventually assess TAE itself.
- **NWP (water industry CCTV units):** a niche with scarce assessors. Comes after the pipeline track.
- **AVI (aviation, non-flying units):** after your CPL. Flight units need CASA instructor or examiner privileges.

4. Income streams and rates

Stream	Paid per	Rate *(est.)*	Pieces/week once established *(est.)*	Weekly *(est.)*
Assessment tool development	unit	$300–1,000	0.5–3	$250–2,000
RPL assessment (full diploma)	candidate	$250–700	3–6	$1,000–3,000

Stream	Paid per	Rate *(est.)*	Pieces/week once established *(est.)*	Weekly *(est.)*
Single-unit assessment	unit	$30–80	varies	—
Validation	unit	$100–300	2–5	$300–1,000
Pipeline coding (if pursued)	km	$110–150 (unverified)	5–15	$600–2,000
Aviation non-flying units	unit/hr	~$50–100/hr equivalent	few	$0–300

Data points I found: RPL assessor contracts at $45–46/hr plus a per-unit rate, and $100–150/hr for specialist RPL. One listing at $50 per completed assessment. Validation advertised at $99 per resource (a discount, so the market floor). Ready-made assessment kits retailing at $230–650 per unit.

With Claude: tool development and validation throughput could plausibly go up 2–3×. Expect per-piece rates to drift down as everyone else gets the same tools.

---

5. Timeline: fastest path to $1k/week

When	Actions
Week 1	Enrol in a self-paced TAE. Book free RPL pre-assessments (PM, Business, IT). Get your ABN and insurance (PI and public liability). Apply for a National Police Check and a Working with Children Check. Get employer permission for outside work
Weeks 1–3	Gather RPL evidence: CV, position descriptions, project documents with sensitive details removed, supervisor verification. Clear any Olympic Dam material with your employer. Build 3 sample assessment tools using Claude
Weeks 2–4	Apply to RTOs and resource-development companies for assessment-writing work. Register with VET-specialist recruitment agencies. Ask which TAE credential they accept and which providers they accept it from
Weeks 4–8	First paid writing work. **$1k/week ≈ 2–3 units/week** *(est.)*
Months 2–4	Diplomas come through. Finish the TAE. Add validation, then RPL assessing. Sign with 3–5 RTOs per field
Months 3–6	Start the Diploma of WHS and TAE50122 Diploma of VET. Keep adding RTOs, drop slow payers
Year 2+	Add NWP (after pipeline work) and AVI (after CPL)

Targets *(est.)*: $1k/week in months 2–4 if writing work lands. $2–3k/week in year 2. $3.5–5k/week near full-time across every stream.

---

6. TAE provider shortlist

Provider	Price found	Duration listed	Notes
St John (TAE40122)	RPL route $3,600 ($250 fee + $280/unit)	6–12 months	**Recommended.** Recognisable name, formal RPL route
TAFE Queensland, online self-directed	$3,520	Up to 18 months average	Safest reputation. Ask whether you can finish faster
HBA, self-paced	~$1,650–1,800; RPL $400 + $300/unit	600–700 hrs, typically 9–11 months	Cheapest. Check quality and acceptance
Swinburne Edge	~$6,180	6–12 months, live online	Reputable, slower
Charles Darwin University	~$4,950 (year unconfirmed)	Varies	Reputable, slower

Realistic fast but safe completion: about 3–6 months. Avoid "TAE in 2 weeks" providers. The regulator has cracked down on them, and good RTOs may reject them when they check your file.

Ask each provider:

1. What's the fastest self-paced completion, and is there a minimum enrolment period?
2. Which units can I get through RPL? (Mention workshops run and training materials built.)

Ask the RTOs you want to work for:

3. Do you accept a TAE from this provider?

Prices came from provider pages and may be out of date or promotional.

7. Parallel track: pipeline CCTV coding (optional)

- **Qualifications:** White Card, then NWPNET037 (operator), then NWPNET059 (supervisor). Usually run as a combined 4-day course by Asset Training (RTO 91255) through SECA, about $2.5–3k. Plus WSA 05-2020 v4.1 from the WSAA shop (the older v3.1 was $740).
- **Before paying, ask 3–4 inspection firms:** do you use remote contract coders, what do you pay per metre, km or hour, and is supervisor sign-off in short supply?
- **Warning sign:** some coding work is already offshored. Aim for supervisor-level sign-off with Australian qualifications, not bulk coding.
- **Links to RTO work:** qualifications plus real coding experience let you assess NWP units, a very small assessor pool.

8. Long track: ACMA Accredited Person (optional)

- Needs electronic engineering qualifications, training or experience **plus** supervised frequency-assignment and interference experience. No course alone gives you that.
- Application fee about $546 (2024 form). Insurance required.
- **Path:** study plus supervised assignment work under an existing accredited person (use your Radlink and CSE Crosscom contacts as mentors), then apply. Probably 2–4 years *(est.)*.
- The portfolio must reflect work you genuinely did.

9. Helicopter CPL add-ons

- Assess non-flying units of the Diploma of Aviation (CPL – Helicopter) at flight-school RTOs: remote, scarce supply.
- The WHS crossover leads to aviation safety units and validating aviation RTOs.
- Drone qualifications link to asset and pipeline inspection.
- An instructor rating is optional, for flying income (in person, modest pay).

---

10. Using Claude

Use it for: drafting assessment tools, mapping, validation reports, organising RPL evidence, admin and invoicing.

Don’t: let it make assessment decisions, or upload identifiable student or client data where contracts restrict it. Remove identifying details first.

---

11. Risks to manage

- **Getting onto RTO books** is the main bottleneck. Apply widely.
- **TAE credential acceptance:** confirm which credential and which providers before you enrol.
- **Employer:** get written permission for outside work, and don’t use confidential project material without clearance.
- **Concentration:** RTOs lose contracts and fail audits. Keep 3–5 per field.
- **Industry currency:** keep a professional development log and update your assessor profile every year.

---

12. The numbers to confirm first

1. The per-unit rate for assessment tool development (ask your first 2–3 enquiries).
2. The per-candidate RPL assessment rate in PM, Business and IT (ask 3–4 RTOs).
3. Which TAE credential and providers your target RTOs accept.
4. (Pipeline) The per-km coding rate.

Part 3: Registered-Work Options

Brief: work you register for once, that's allocated or offered to you, paid per piece, mostly remote, well paid, and compatible with a full-time helicopter CPL from early 2028.

Key: ✅ verified from a primary or official source · *(est.)* estimate · ❓ couldn't find

Summary ranking

Rank	Option	Pay	Verdict
1	Expert networks	~US$100–700/hr reported	**Do now.** No cost, no course
2	Specialist RPL assessing	$100–150/hr advertised	**Core base.** Already planned
3	Sessional tribunal member (ART)	✅ $1,078/day general, $1,700/day senior	**Long shot, but the best paid.** Lodge an EOI when rounds open
4	Audit and risk committees	✅ $350–450/meeting member, ~$650–740 chair	**Small money.** Builds a track record for #3 and paid boards
5	Insurance catastrophe work	❓	**Situational.** Clashes with the CPL
6	Grant assessment panels	❓ per application	**Weak.** Mostly arts, research and medical
7	NatHERS energy assessing	Desktop work offshored at AU$10–12/hr	**Drop the desktop version**

1. Expert networks (GLG, AlphaSights, Guidepoint, Third Bridge, Coleman, Arbolus)

How it works: investors, consultancies and corporates pay networks to set up short calls (typically 30–60 min) with practitioners. You register a profile and the network contacts you when a client's question matches your experience. You accept or decline. There's no pitching.

Pay (reported, not official):

- Early-career or generalist: ~US$100–300/hr (Guidepoint early-career ~US$100–200).
- Mid or senior (VP level and up): ~US$300–700/hr.
- Scarce or senior executive: US$800–1,000+/hr cited.
- You set or negotiate your rate. Start near the network's average and raise it after good calls. GLG reportedly pushes rates down. Clients pay the network several times what you get.

Volume: irregular, and driven by what clients happen to be researching. Some experts get a few calls a month; others go months without one *(est.)*. Treat it as bonus income, not a base.

Topics where you'd be asked:

- Critical comms in mining: TETRA, DMR, analog-to-digital migration, DAMM TetraFlex, Simoco, the move to private LTE and 5G.
- Radio vendors and integrators in Australia.
- Mining technology adoption and operational technology integration.
- Later: water-utility asset inspection, the Australian VET market, helicopter training.

Hard constraints:

- **Never discuss your current employer's confidential information.** BHP is a listed company, so material non-public information carries insider-trading risk. Networks screen for this and will ask you to confirm.
- Check your employment contract and conflict-of-interest policy. Some employers ban or restrict expert-network calls.
- Talk about the industry, technologies and vendors, not your employer's internal plans.

Fit with the CPL: excellent. Calls are short, scheduled, remote and often on Australian evenings for overseas clients.

Cost and time to start: $0, this week.

First steps: create profiles on 3–4 networks, describing specific roles and technologies rather than general experience. Set a starting rate. Check your employment contract.

---

2. Specialist RPL assessing (RTO)

(Covered in detail in the RTO plan.)

- ✅ Advertised at $100–150/hr for specialist remote contract RPL.
- Entry: TAE plus the qualifications you're assessing (project management, business and IT diplomas through RPL) plus industry experience.
- Fit: good. Remote, allocated work with flexible hours.
- Role: **your dependable base income.**

---

3. Sessional tribunal member, Administrative Review Tribunal (federal) or SACAT (SA)

How it works: you're appointed for a 2–5 year term as a *sessional* member, then allocated hearings or decision days as needed. It's merit-based. You lodge an expression of interest against published criteria, an independent panel assesses candidates, and the Attorney-General appoints from the suitable list.

Pay (✅ Remuneration Tribunal 2025 determination, from 1 July 2025): | ART office (sessional) | Daily fee | |—|—| | General member | **$1,078** | | Senior member | **$1,700** | | Deputy President | $2,210 |

SACAT sessional rates are set by the SA Remuneration Tribunal ❓ (amount not found).

Volume: depends on how much the tribunal allocates. Sessional members are called on as needed. A few days a month would be $3–5k a month at general-member rates *(est.)*.

Requirements (AAT-era criteria; check the current ART ones): ability to conduct hearings, decision-making and written reasons, plus relevant specialist knowledge. ART divisions include

migration, social security, NDIS, taxation and general. Recent rounds appointed batches of general members, e.g. 8 starting March 2025.

Fit for you: a stretch now, but credible later. An MPA, public-administration knowledge, analytical work and written reasoning all count. What you lack is a **decision-making or quasi-judicial track record**. Committee work (#4) and any regulatory or decision-maker roles build that.

Fit with the CPL: good. Hearing days are scheduled and you can decline allocations.

Cost: $0 to apply. Optional training in decision-making or administrative law strengthens an application.

First steps: join the AG Department's ART appointments register and watch for rounds. Read the current selection criteria. Look for SACAT sessional rounds through the SA Attorney-General's Department.

---

4. Independent member of audit and risk committees (councils, agencies, not-for-profits)

How it works: councils advertise expressions of interest for independent members, then appoint them for set terms. Meetings are typically quarterly, plus a few extras.

Pay (✅ SA councils, 2024–25):

- Independent member: **$350–450 per meeting**. The average across 14 SA councils was $449.
- Chair: about $650–740 per meeting. The average across 9 councils was $740.
- Some councils add travel. Older or regional rates go as low as $200.

Volume: about 4–6 meetings a year per committee. **Five committees ≈ $9–13k a year** *(est.)*.

Requirements: usually finance, audit, risk or governance experience. A CPA or CA is often preferred but not required. MPA plus risk and governance experience is competitive for some councils. The AICD Company Directors Course strengthens you for this and for paid boards.

Fit with the CPL: excellent. Quarterly and scheduled.

The real value: not the money. It's **a governance and decision-making track record**, which strengthens a tribunal application (#3) and leads to paid state boards and committees.

First steps: search current SA council EOIs (they're posted regularly on tender sites and council noticeboards). Register on the SA Government boards and committees register.

---

5. Insurance claims and catastrophe work

How it works: insurers and adjusting firms (McLarens, Sedgwick, Crawford, and others) handle claims through field and desktop adjusters. After a disaster, firms bring in interstate and overseas adjusters for extended deployments. The industry body has said firms **can't keep enough adjusters employed between events**, which is why surge contractors are used.

Pay: ❓ no published rates found. Ask recruiters who place adjusters.

Entry: Diploma of Loss Adjusting (FNS51415, or its current replacement; check), plus ANZIIF membership. Desktop claims-assessor roles have a lower barrier.

Fit with the CPL: poor. Disaster deployments are unpredictable and need weeks away. Better suited to before or after the CPL.

Verdict: worth a look only if you want surge income in 2027 or after the CPL.

---

6. Grant assessment panels

How it works: agencies keep registers of peer or expert assessors. You're invited to rounds and paid a reading fee per application plus meeting fees.

What I found:

- **Creative Australia:** a reading fee per application plus meeting and admin fees ✅, amount ❓. About a week of reading per round, 15–30 min per application, 1–2 days of meetings, 3-year terms. **Arts expertise required.**
- **CreateSA and the History Trust (SA):** sitting fees. Government employees can't be paid.
- **ARC and MRFF:** research and medical assessors, mostly academics.

Fit for you: weak. Most open registers are arts, research or medical. Business and innovation grant assessment is often contracted to firms or done by public servants.

Verdict: low and sporadic pay. Only if a register matches a real specialisation.

---

7. NatHERS energy assessing

What I found:

- Every new home needs a rating. Consumer guides say most homes cost "at least a few hundred dollars".
- **Red flag:** desktop rating work is advertised **offshore and remote at AU$10–12/hr** (Philippines job boards, Scale-X Solutions). Desktop ratings are being sent overseas.
- NatHERS is expanding to **existing homes** (from mid-2026). Those assessments are **on site** (using the magicplan app), so they can't go overseas. A 2024 trial offered subsidised training plus $6,000–15,000 in staged payments.
- Entry: Cert IV in NatHERS Assessment plus membership of an accrediting organisation (ABSA or HERA), $10M public liability insurance, a police check.

Verdict: drop the desktop version. It's been commoditised offshore. The existing-homes version is field work and only worth considering if you want local, flexible on-site work.

Recommended combination

Timing	What
This week	Expert network profiles (#1). Check your employment contract first
2027	RPL assessing (#2) as the base. 1–3 council audit and risk committees (#4)
When rounds open	ART and SACAT expressions of interest (#3), strengthened by committee experience

Timing	What
During the CPL (2028)	Expert calls plus RPL plus committees: all scheduled, flexible, remote
Optional	Catastrophe work before or after the CPL (#5)

Income shape during the CPL *(est.)*: RPL as the steady base, expert calls as irregular high-rate bonuses, committees as a small steady add-on, and later tribunal days if you’re appointed (which would be the step change).

Part 4: Auditor and Mediator Options

Rule: pay for a qualification or accreditation, get onto an organisation's books, and get allocated work with no bidding per job.

Key: ✅ verified · *(est.)* estimate · ❓ couldn't find

All three have the same structure: **a part you pay for (the course), then an experience requirement (supervised audits or mediation hours) before steady allocation.** The experience part is what actually gets you work.

---

1. Contract ISO lead auditor for certification bodies

How work gets to you

Certification bodies (Bureau Veritas, BSI, SAI Global/Intertek, LRQA, DEKRA and others) must audit every certified organisation every year (surveillance audits) and every 3 years (recertification). They schedule those audits to **employed and subcontract auditors**.

- ✅ Bureau Veritas advertises subcontract management-systems auditor roles across Australian states.
- ✅ Certification bodies pay contract auditors **per audit day according to grade**: probationary, auditor, lead auditor.
- Audits are booked weeks or months ahead. You accept or decline.

Pay

- ✅ Certification bodies **charge clients about $1,200–2,200 per audit day** (an industry blog figure, indicative only).
- The auditor's share isn't published ❓. A plausible contractor rate is **about $700–1,200 per day** *(est.)*, rising with grade and standard. Information security and specialist standards pay at the top.
- Employed equivalent: ✅ about $87–106k a year advertised for a Sydney management-systems auditor.

What you pay for

Item	Detail	Cost
Lead auditor course (ISO 9001, 27001, 45001, etc.)	3–5 days. Exemplar Global or CQI/IRCA certified. Covers the units for the standard, auditing, and leading audit teams	✅ about US$900–1,500 online; *(est.)* about AU$2–3.5k in person
Auditor certification (Exemplar Global or CQI/IRCA)	Application plus an audit log	A few hundred dollars a year *(est.)*
Insurance	Professional indemnity, often required for subcontractors	*(est.)* about $1–2k a year

✅ Exemplar Global certificates for the auditing and leading-teams units must be under 10 years old to count as prerequisites.

The experience requirement

- **General:** ✅ Bureau Veritas wants a lead auditor qualification **plus demonstrated management-systems audit experience**.
- **ISO 27001 specifically:** ✅ under the standard that governs information-security auditors (ISO/IEC 27006), you need:
  - university-level education or equivalent,
  - workplace experience in IT **and** information security, and
  - experience as an **auditor-in-training** on at least **one initial or recertification audit and one surveillance audit**, supervised by an evaluator.
- **How to clear it:**
  1. Do internal audits in your current job (most large companies run them), or supplier audits.
  2. Get a certification body to take you on as a **probationary or trainee auditor**. That's the probationary grade, and it's the normal route in.
  3. Log your audit days to move up a grade.

Lateral angle: ISO 42001 (AI management systems)

- A **new standard (2023)**, and certification bodies are now offering 42001 certification ✅.
- Very few auditors anywhere have experience with it. That's the "everyone starts from zero" advantage.
- It suits an IT and architecture background and someone using AI heavily.
- Suggested stack: **27001 plus 42001**, or **9001 plus 27001 plus 42001**.

Fit with the CPL

Good. Audits are scheduled well ahead and run 1–3 days. Stage 1 and some surveillance audits are often remote. You choose which audits to accept.

Time to first paid work

About 6–12 months: course, internal or trainee audits, then probationary contract work *(est.)*.

Verdict

✅ **The strongest of the three.** Compliance guarantees the demand, scheduling is built into the system, there's no bidding, and 27001 and 42001 give you a technical niche.

First steps

1. Book a lead auditor course (27001 first if you're aiming for the technical niche, or 9001 if you also want NDIS work, see #2).
2. Volunteer for internal audits at work.
3. Approach 4–5 certification bodies about probationary or trainee auditor intake.

---

2. NDIS quality auditor

How work gets to you

- ✅ Only **Approved Quality Auditors** (organisations accredited by JAS-ANZ and approved by the NDIS Commission, e.g. BSI and SAI) can audit providers against the NDIS Practice Standards. Registered providers must be audited, so demand is built in.
- ✅ Individual auditors are **employed or contracted** by an approved auditor. That organisation **endorses** you, and you then complete the **NDIS Commission auditor training**.

- ✅ Contract roles exist: a PwC listing (2021) offered “an attractive rate per job, negotiated prior to engagement”. Other contractor listings cover VIC, NSW, QLD and WA.

Pay

❓ No published rates. Pay is per job or per day, negotiated. Probably similar to ISO auditor rates, **about $700–1,100 per day** *(est.)*.

What you pay for

- ✅ An **auditor or lead auditor course**. The same ISO 9001 lead auditor course from #1 works as the base.
- Knowledge of the NDIS Act and rules, and the Practice Standards.
- The NDIS Commission training happens **after** an approved auditor endorses you, and is often arranged by them.

The experience requirement

- Approved auditors want audit experience.
- ✅ There are separate competence requirements for **technical experts** (people with disability-sector experience).
- **How to clear it:** ISO 9001 audit days from #1 count as audit experience, then apply for NDIS endorsement.

Fit with the CPL

Moderate. Some document review is remote, but audits include **site visits and interviews with participants and staff**.

Notes

- ✅ The NDIS Commission isn’t currently accepting **new approved-auditor organisations**. That applies to organisations, not individuals, but it means the existing approved auditors have the volume and need people.
- NDIS registration and regulation are expanding. Expect audit demand to stay strong *(est.)*.

Verdict

🟡 **A strong add-on to #1, not something to do on its own.** One 9001 lead auditor course opens both certification-body work and NDIS endorsement.

---

3. Accredited mediator (AMDRAS, which replaced NMAS)

How work gets to you

Courts, tribunals and dispute schemes keep **mediator panels** and allocate matters to them.

- ✅ ACT Magistrates Court panel: **$1,500 per mediation** including GST, flat rate, 3-year panel term, **no guaranteed volume**.
- ✅ ACT Supreme Court panel (2025 EOI): **$1,800 per mediation** including GST, sessions capped at 4 hours.
- Others to check (SA): the SA Small Business Commissioner, SACAT, retail and commercial lease disputes, and the federal small business and franchising schemes ❓ (panel details not found).

Pay

✅ **$1,500–1,800 per mediation** on court panels (half-day sessions). Private and workplace mediations vary *(est.)*.

What you pay for

Item	Detail	Cost
AMDRAS training	✅ The national system changed from NMAS to AMDRAS on 1 July 2025. Training is about 6 days / 45 hours	✅ one provider lists about $1,200–1,600 (the listing is ambiguous); *(est.)* typically $2.5–5k
Assessment	✅ A separate assessment after training, then apply to an accrediting body (e.g. Resolution Institute)	❓
Renewal	✅ At least 25 hours of CPD per cycle. NMAS also required **25 hours of mediation practice every 2 years**. Check whether AMDRAS keeps this	Membership plus CPD *(est.)* $500–1,500 a year

The experience requirement

- Court panels want experienced mediators, and some prefer legal backgrounds.
- Allocation isn't guaranteed even once you're on a panel.
- **How to clear it:** co-mediate with experienced mediators, volunteer with community mediation schemes, or do workplace mediations through employee-assistance and HR providers. That builds both your hours and the renewal practice requirement.

Fit with the CPL

Good. Half-day sessions, often by video, scheduled in advance.

Strategic value

Dispute-resolution experience **directly strengthens a tribunal application** (the ART at $1,078–1,700/day, which you've banked). Mediation and the tribunal reinforce each other.

Verdict

🟡 **Moderate income, high strategic value.** The money per matter is good, but volume isn't guaranteed. The best reason to do it is as a step towards a tribunal appointment.

Combined recommendation

Order	Pay for	Opens
1	**ISO 9001 lead auditor** (or 27001)	Certification-body contract audits, plus the NDIS route
2	**ISO 27001, then 42001 lead auditor**	Technical, scarce, better-paid audits (AI management systems is new, with few auditors)

Order	Pay for	Opens
3	**NDIS endorsement** (through an approved auditor)	A second auditing stream from the same base
4	**AMDRAS mediator accreditation**	Court and scheme panels at about $1,500–1,800 a matter, and a stronger tribunal application

How this fits the wider plan: RPL assessing (base) + auditing (the main pay-to-win stream) + mediation (feeds the tribunal option) + expert networks (bonus). All of it is scheduled, allocated and compatible with the 2028 CPL.

Part 5: IRAP, Scheme Auditors, SA Planning Panels, Privacy

Rule: pay for a qualification, then get allocated work with no bidding per job.

Key: ✅ verified · *(est.)* estimate · ❓ couldn't find

Bottom line

Option	Pay	Does it fit "pay to win"?	Verdict
IRAP assessor	❓ no published rate. Among the top security day rates *(est.)*	❌ Not quickly. It has a hard experience requirement	**Long-term top prize.** Needs a move into security work
Scheme auditor: heavy vehicle (HVA)	❓ about $700–1,100/day *(est.)*	✅ Mostly	**A good add-on to ISO auditing.** The scheme is new, so everyone is starting fresh
Scheme auditor: SA food safety	❓	🟡	**Weak fit.** Needs a food-safety background
SA council assessment panel	✅ $400–550/meeting (presiding member $600–650)	🟡 Accreditation required	**Probably blocked** without planning credentials. Worth checking
Privacy and AI-governance assessor	❓	🟡 Certifications get you considered; work comes through firms	**Medium on its own, strong as part of a bundle**

The pattern across all four: there's a clear progression **ISO 27001 lead auditor → ISO 42001 → IAPP privacy and AI governance → (2 years of security work) → CISSP or CISM → IRAP**. Every step is a qualification you pay for that leads to allocated work, and IRAP is at the top.

1. IRAP assessor

What it is

Government agencies (and cloud providers selling to them) must have their systems assessed against Australia's government security rules by an **ASD-endorsed IRAP assessor**. ✅ In late 2025 ASD asked the market for IRAP-qualified people to act as a **surge workforce**, a sign that demand exceeds supply.

How work reaches you

Through consultancies, government panels and direct engagements. There's no official rate card. Assessors scope each engagement individually ✅.

Pay

❓ No published day rate. One unverified site claims assessments cost **$50k–300k** each. IRAP is at the top end of security contracting rates *(est.)*.

Requirements ✅ (from ASD sources)

Requirement	Detail
Certifications	**One from Category A** (CISM, CISSP, GSLC) **and one from Category B** (CISA, CRISC, GSNA, PCI QSA, **ISO 27001 Lead Auditor**). GSNA won't be accepted after 31 Dec 2026
Experience	**5 years of technical ICT experience, including at least 2 years in information security** on systems using the government's Information Security Manual. (One ASD page says 5 years in security roles; check the current policy)
Clearance	**NV1**. ASD will sponsor it after you pass the training and exam
Training	✅ IRAP assessor course: **$7,290 + GST** for new assessors (Cyber Collaboration Centre), 5 days, virtual. Sessions were listed for July and August 2026
Renewal	Reported as every 36 months, or by re-sitting the exam *(secondary source)*

What stands in your way

- **ISO 27001 Lead Auditor (already banked) covers Category B.**
- Category A (CISSP or CISM) needs **years of security work experience** in its own right.
- You need **2+ years of genuine information-security work**. Business analysis and architecture count as technical ICT experience, but not as security work, unless your work has been security-focused.

Path

1. ISO 27001 lead auditor (also covers Category B).
2. Move into security-focused work: security architecture, risk and compliance, or ISMS work. Your architecture background is the natural route in.
3. After about 2 years, get CISSP or CISM.
4. Do the IRAP course and exam, then the NV1 clearance (sponsored by ASD).

Timeline: about 2–4 years *(est.)*.

Fit with the CPL

Good once you're endorsed. Assessments are long projects with flexible scheduling. The path itself (building security experience) runs alongside your day job, not during flight training.

Verdict

The top prize, but not pay-to-win. It's experience-gated. Plan for it as the 2029–2030 summit of the auditor track, not as income for 2027.

---

2. Auditors for government-run schemes

2a. Heavy Vehicle Accreditation (HVA), which replaces NHVAS

- ✅ **The NHVR won't grant new NHVAS accreditations after 1 August 2026.** The new HVA scheme starts with new auditor requirements from mid-2026, and existing auditors must meet them to stay approved.
- **Why that matters:** a new scheme means the auditor pool is being re-qualified, so new entrants compete on a near-level field.
- **Requirements ✅:**
  - You apply as an individual and must meet the National Audit Standard.
  - Exemplar Global HVA Auditor Certification: an Exemplar-certified QMS auditor course (the ISO 9001 lead auditor course you've banked) plus HVA industry assessments.
  - 4-year recertification cycle.
  - Professional indemnity and public liability insurance (under the old scheme).
- **How work reaches you:** accredited transport operators **must be audited**. They engage auditors directly or through audit firms. **There's some selling to operators**, but audit firms do subcontract work *(est.)*.
- **Pay:** ❓ about $700–1,100/day *(est.)*, similar to ISO auditing.
- **Fit:** stacks on the 9001 lead auditor course. Audits are on site at operators' depots, so it's local and scheduled.
- **Verdict:** ✅ **A good add-on stream from the same base course**, and the timing (scheme reset) is right.

2b. SA food safety auditor

- ✅ Approved under section 73 of the Food Act 2001 (SA). SA Health keeps a register of approved auditors by council.
- Employers ask for **Exemplar Global Food Safety Auditor certification** (national scheme, Level 4 for high-risk processes).
- Contact for the current criteria: SA Health food audit team (HealthFoodAudit@sa.gov.au, 08 8226 7100).
- **Verdict:** 🟡 **A weak fit.** Food-science or food-safety background is expected. Skip unless you want that sector.

---

3. Independent member of an SA council assessment panel (CAP)

What it is

Panels decide publicly notified, performance-assessed development applications. Councils appoint independent members through expressions of interest. Meetings are typically **monthly**.

Pay ✅ (2025–26)

Council	Member	Presiding member
City of Adelaide (Aug 2025)	$550/meeting	$650
Coorong (2026)	$400	$600
Adelaide Hills (date unclear)	$420 ex GST	$550

Fees cover preparation as well as the meeting. **One panel ≈ $5–7k a year. Three panels ≈ $15–20k** *(est.)*.

Requirements

- ✅ Members must be **Accredited Professionals, Planning Level 2 (assessment panel member)** under SA's planning legislation.
- ✅ The Accreditation Authority says Level 2 is now **easier through a "recognised qualification and experience" pathway**. The exact criteria are in its *Qualifications, Skills and Experience Requirements* document, which I couldn't access.
- ✅ Planning Institute of Australia Registered Planners can get Level 2 without further competency assessment.
- Older guidance mentioned 10+ years of planning experience and a planning or related degree. That may be out of date.
- ❓ **Whether non-planners qualify isn't confirmed.** A related degree with relevant experience may count, but public administration may not.

Fit with the CPL

Good. Monthly evening meetings.

Verdict

🟡 **Probably blocked** unless the recognised pathway accepts an MPA plus relevant experience. **Cheap to check:** download the requirements document from PlanSA, or email the Accreditation Authority with your qualifications. If you're eligible, it's steady, allocated, decision-making work that also strengthens a tribunal application.

---

4. Privacy and AI-governance assessor (IAPP)

Demand

- ✅ The Government released the **Tranche 2 Privacy Act reform exposure draft** (Privacy Amendment (Personal Data Protection) Bill 2026) on 31 August 2026: about 40 proposals.
- ✅ It proposes **mandatory privacy impact assessments for "high privacy risk activities"**, including some uses of AI.
- ✅ The start date isn't set yet, and the bill may change.
- Government agencies already have to do privacy impact assessments for high-risk projects.

How work reaches you

Mostly through **consultancies and law firms on government panels** that bring in associates, plus agencies directly. **The certifications get you considered; firms allocate the work.** It's less purely allocated than auditing.

What you pay for ✅

Certification	Exam fee
CIPM (privacy programme management)	US$550
CIPT (privacy in technology)	US$550
AIGP (AI governance)	US$649 (member) – 799
Maintenance	About US$250 per 2-year term, or included with IAPP membership

(No IAPP certification covers Australian law specifically. CIPM, CIPT and AIGP apply across jurisdictions.)

Pay

❓ Not found. Privacy consultant day rates are probably in line with risk and compliance consulting *(est.)*.

Fit with the CPL

Good. Desktop assessments and reports.

Verdict

🟡 **Medium on its own, strong as part of a bundle. ISO 27001 + ISO 42001 + AIGP/CIPT** makes you an **information security, AI-governance and privacy assessor**. That's one person covering three compliance regimes at once, at a time when AI regulation is arriving.

Recommended sequence

When	Pay for	Opens
2027 H1	ISO 9001 lead auditor	Certification-body audits, the NDIS route, HVA
2027 H1	ISO 27001 lead auditor	Information-security audits. **Also covers IRAP Category B**
2027 H2	ISO 42001 lead auditor + IAPP AIGP	AI-governance audits and assessments, with demand driven by the privacy reforms
2027 H2	HVA auditor certification	Heavy vehicle scheme audits, while the scheme is being reset
Check now	Email the SA planning Accreditation Authority	Planning panels, if eligible
2029+	Security work experience → CISSP/CISM → IRAP	The top tier

Part 6: Construction Adjudicator and SMB1001

Key: ✅ verified · *(est.)* estimate · ❓ couldn't find

Bottom line

Option	Verdict
Construction payment adjudicator	🟡 **Real and allocated, but lower volume and more experience-gated than it first looked.** Each matter pays well, but there are few matters per adjudicator. Best treated as a later rung on the dispute-resolution ladder (mediation → adjudication → tribunal)
SMB1001 cyber auditor	❌ **Weak.** Most SMB1001 levels are self-assessed by the business, so there's little audit work, and the auditor pathway isn't published. Park it

1. Construction payment adjudicator (Security of Payment)

How work reaches you

Under every state's Security of Payment Act, a contractor who isn't paid can apply for **fast, binding adjudication** of the payment claim. Adjudicators are **appointed to each matter**, so you never bid for work:

- **SA:** ✅ **authorised nominating authorities**, approved by the Minister through the Small Business Commission, nominate adjudicators. There's a code of conduct for those authorities.
- **QLD:** ✅ the **QBCC Adjudication Registry** (a government regulator) registers adjudicators and refers applications to them.
- **NSW, VIC, WA:** nominating authorities or registries, each with its own rules.

Adjudication is **document-based desk work**: submissions, the contract and payment schedules, then a written determination within **tight statutory deadlines** (roughly 10 business days, varying by state).

Volume (the main catch)

✅ QLD 2025–26 (QBCC annual report, via a secondary source): **559 applications (477 valid)**, with **134 registered adjudicators** (51 Grade 1, 83 Grade 2).

- That's an average of **about 3–4 matters per adjudicator per year**. In practice, experienced adjudicators get most of them *(est.)*.
- SA volume is smaller than QLD's *(est.)*. NSW has the largest market.
- **So this is occasional, high-value work, not a steady stream.**

Pay

- ✅ Adjudicator fees are paid by the parties, and **the adjudicator decides how the cost is split** between them.

- ❓ No published rates found. Hourly rates are probably about $250–450 *(est.)*, and a determination might take 10–40 hours, so **about $3–15k per matter** *(est.)*.
- ✅ An old QLD regulation listed a $718.65 registration fee. That's out of date, so check the current fee.

What you pay for, and the experience requirement

State	Qualification	Experience
QLD ✅	A **Certificate in Adjudication** from **Contract Administration Group**, the only authorised provider, or an equivalent the Registrar accepts. Then apply with Form S159. Registration lasts 3 years, with CPD and a code of conduct	**"Relevant, sustained and verifiable dispute resolution experience, preferably in building and construction."** Assessed on recency, complexity, referees and **interview**
SA ✅ (partly)	Regulation 6 of the SA Security of Payment Regulations requires a **formal course of training** plus one of several qualifying bases, including **membership or eligibility for membership of listed professional bodies**	❓ The list of bodies wasn't accessible. ⚠️ The 2011 Regulations show as **revoked from 31 August 2026**, so check what replaced them before relying on any SA detail
WA ✅	Adjudicator training courses approved by the Building Commissioner. Grades: provisional adjudicator, adjudicator, review adjudicator	A provisional grade exists. **That's a possible entry point for newcomers**

Where you stand: you have the decision-making and written-reasoning skills, but **not yet the dispute-resolution track record** or a construction background. **AMDRAS mediation (banked) builds exactly that track record.** Tribunal or committee experience would help too.

Fit with the CPL

🟡 Desk-based, but the **statutory deadlines don't move**. You can decline appointments during busy flying periods. It's better suited to after the CPL.

Path

1. Get AMDRAS mediator accreditation and build dispute-resolution hours (banked).
2. Check the current SA regulations and approach SA nominating authorities about their adjudicator criteria.
3. Do an adjudication certificate. QLD's Contract Administration Group certificate is the clearest route, and a QLD registration may work from Adelaide because adjudication is done remotely. Check whether QLD accepts interstate-based adjudicators.
4. Start through a **provisional or Grade 2** level (WA provisional, QLD Grade 2), then build a track record.

Verdict

🟡 **A good rung on the ladder, not a main income stream.** Each matter pays well and is genuinely allocated, but volume per adjudicator is low and entry depends on experience. **It works**

best combined: mediation → adjudication → tribunal, each strengthening the next. Target it in 2028–2029.

---

2. SMB1001 cyber security certification auditor

What it is

SMB1001 is an Australian cybersecurity certification standard for small and medium businesses, published by Dynamic Standards International (DSI). ✅ It has **five levels**: Bronze (7 controls), Silver (17), Gold (27), Platinum (32), Diamond (39). Sources reference both the 2025 and 2026 editions, so check which is current.

The problem

✅ **Levels 1–3 (Bronze to Gold) can be self-attested by the business.** Only **Levels 4–5 (Platinum and Diamond) need independent verification**. (One source puts the cut-off after Silver.)

- Most SMBs stop at Bronze to Gold, so **independent audit volume is small** *(est.)*.
- ❓ **The auditor and certifier pathway isn't published.** I found nothing on how DSI accredits certification bodies or auditors, or on JAS-ANZ's involvement.

Verdict

❌ **Park it.** It fails the volume test: most certifications don't need an auditor. Revisit only if DSI publishes an auditor scheme or makes audits mandatory at lower levels (for example, if government or insurers start requiring Gold with audit). The ISO 27001 and 42001 path you've banked covers the same cyber-audit space with far more volume.

Effect on the banked plan

- **Adjudication becomes a 2028–29 add-on** to the dispute-resolution ladder (AMDRAS mediation → adjudication → tribunal).
- **SMB1001 is dropped.** ISO 27001 and 42001, then IRAP, stays the cyber track.

Part 7: Gateway Reviewer, Greenhouse Auditor, BARS

Key: ✅ verified · *(est.)* estimate · ❓ couldn't find

Bottom line

Option	Fits the rule?	Verdict
Gateway / assurance reviewer	✅ Register, do the accredited training, then you're **appointed to review teams**	⭐ **The best of the three for you now.** Your large-systems delivery experience is the qualification. Pay is a daily rate *(amount ❓)*
Greenhouse and energy auditor (and climate assurance)	🟡 Free to register, but **experience requirements** apply. Work comes through audit firms	**Strong tailwind, slower entry.** Best as an extension of the ISO auditor path
BARS aviation auditor	🟡 A 3-day course, but you need **experienced flight-operations credentials**	**Years after the CPL.** A future niche, not near-term income

1. Gateway and assurance reviewer

What it is

Governments put major projects through **Gateway reviews**: short, independent reviews at set decision points (business case, procurement, delivery readiness, benefits). Review teams are typically **4 people, including a team leader** ✅ (NZ model; Australian states are similar). A review usually takes a few days of document review and interviews, then a report.

How work reaches you ✅

You register, train, and are then **appointed to review teams** by the coordinating agency.

- **NSW:** ✅ an **Expert Reviewer Panel**, "independent highly qualified expert reviewers", from which a review manager **appoints the review team**. It's used for all ICT and digital projects of **$5m or more** (Digital NSW), with a separate infrastructure stream (Infrastructure NSW).
- **WA:** ✅ complete the registration form plus **accredited Gateway Reviewer Team Member training**. Public-sector reviewers must be at executive level. Private-sector reviewers are paid.
- **QLD and VIC:** ✅ both run Gateway programmes (Queensland Treasury, Victorian DTF). Their reviewer intake processes still need checking.
- **Federal:** Department of Finance assurance reviews ❓ (reviewer engagement details not found).
- **SA:** ❓ check whether SA Treasury runs a Gateway-equivalent reviewer pool.

Pay

✅ Private-sector reviewers are paid a **daily rate** (confirmed in NZ and Northern Ireland, and WA says private reviewers are paid). ❓ No Australian rates found. Probably **about $1,500–2,500/day**, in line with senior consulting *(est.)*.

Requirements

- ✅ Gateway training (WA: accredited team member training; NZ: a training workshop plus a skills profile).
- Senior experience in **project, programme, ICT or commercial delivery**. Your business-analysis and solutions-architecture work on major systems is directly relevant.
- ✅ Confidentiality and conflict-of-interest undertakings for each review.
- ✅ **Progression:** team leaders usually have **8–10 reviews with consistently good feedback** behind them (NZ). Team leaders get more allocations at a higher rate.
- ✅ Selection isn't guaranteed.

Fit with the CPL

Good. Reviews are scheduled in advance, last a few days, and are increasingly done partly by video. Each review is time-boxed.

Verdict

⭐ **Strongest near-term fit.** It's allocated, and your experience counts as the qualification, so you don't need years more credentials. Register with **NSW Digital Assurance (ICT stream)**, **WA** and **QLD**, plus SA if one exists. Assurance reviews are commonly done interstate or remotely *(est.)*.

First steps

1. Download the NSW Expert Reviewer Panel Framework and the WA "Becoming a Gateway Reviewer" brochure and registration form.
2. Do the accredited reviewer training as soon as a state offers it.
3. Ask SA Treasury and Finance whether SA runs a Gateway or assurance reviewer pool.

---

2. Registered greenhouse and energy auditor (and climate-reporting assurance)

What it is

Large emitters and energy users report under the national greenhouse and energy reporting scheme (NGER). The Clean Energy Regulator **requires audits by registered greenhouse and energy auditors**. Separately, **mandatory climate-related financial reporting** has been phased in for large companies since 2025, with assurance requirements increasing over time *(phasing to verify)*.

Registration ✅

- **Category 1 is closed to new applicants** (since 22 October 2019).
- **Category 2 is the route in.** Ongoing registration requires acting as **audit team leader at least once every 3 years**, plus one other criterion.
- **No application fee.** A national police check is required.
- ✅ The regulator has an **arrangement with CPA Australia to help non-financial auditors** become Category 2 auditors.
- ❓ The exact auditing-experience hours and training for Category 2 are in the regulator's *Greenhouse and Energy Auditor Registration Guideline* and the 2018 auditor registration instrument (not retrieved). Expect requirements for **completed audit engagements plus greenhouse-specific training** *(est.)*.

How work reaches you

Through audit firms (accounting firms and specialist greenhouse audit firms) that win NGER and climate-assurance engagements and staff them with registered auditors and specialists. The regulator doesn't allocate work directly, but the firms do once you're on their books.

Pay

❓ Not found. About $1,000–1,600/day *(est.)* as a contract specialist.

Your edge

- **Mines are among the biggest NGER reporters.** Knowing how mine sites actually run (energy, diesel, operational systems) is useful on audit teams.
- It stacks on the **ISO lead auditor** path (banked). An ISO 14064 (greenhouse verification) course is a likely add-on *(est.)*.

Fit with the CPL

🟡 Mostly desk work, with some site visits. Audits cluster around NGER reporting deadlines (reports are due 31 October each year), so work is seasonal.

Verdict

🟡 **A strong tailwind, but you build up to it through the auditor path.** Do ISO lead auditor work first, then greenhouse training and audits under supervision, then apply for Category 2. Contract to audit firms during the reporting season. Target late 2027 to 2028.

First steps

1. Read the regulator's auditor registration guideline (the Category 2 experience criteria).
2. Ask CPA Australia about its pathway for non-financial auditors.
3. Add an ISO 14064 greenhouse verification course to the ISO auditor plan.

---

3. BARS aviation auditor (Basic Aviation Risk Standard)

What it is

BARS is the Flight Safety Foundation's aviation safety standard used by the **resources industry**. Mining and energy companies require their charter, helicopter and fixed-wing operators to be **BARS-audited**.

How work reaches you ✅

A **three-way arrangement: the operator, the Flight Safety Foundation, and a registered BARS audit company.** Individual auditors **work through registered BARS audit companies**, which allocate the audits.

Requirements ✅

- Open to **experienced flight-operations, or maintenance and engineering, professionals** who already have **aviation lead auditor training**.
- A **3-day Auditor Accreditation course**: the BARS standard, implementation guidelines, audit methodology, and BARSoft (the audit recording software).
- ✅ You can **take the course before meeting all prerequisites** if you expect to meet them **within 12 months** of finishing (older course description).

- **Initial, annual recurrent, and lead-auditor upgrade training.**
- ❓ The exact experience thresholds and fees are on the Foundation's auditor training page.

Pay

❓ Day rate plus travel *(est.)*.

Your fit

- ✅ A CPL plus mining knowledge is an unusual combination.
- ❌ "Experienced flight-operations professional" will mean **years of commercial flying or ops-management experience** after your CPL. A new CPL holder won't qualify.

Fit with the CPL

After the CPL. Audits are **on site at operators' bases**, often remote locations.

Verdict

🟡 **A future niche (around 2030+), not near-term income.** Do the aviation lead auditor course (it complements ISO auditing) once you're flying commercially. Then BARS accreditation when your ops experience is enough.

Effect on the banked plan

- **Gateway reviewing moves near the top of the list.** Allocated, high day rate, your existing experience qualifies, scheduled and partly remote. Register in 2027.
- **Greenhouse auditing becomes the 2028 extension** of the ISO auditor path.
- **BARS stays the long-term aviation-audit niche** after the CPL.

Appendix A: Original Brief, Radio, Pipeline and CPL Funding

Fact-check of the original brief

- **What checked out:** NWPNET037 and NWPNET059 are real units. Asset Training (RTO 91255) runs the combined 4-day course through SECA (max 10 students; roughly $2,495–3,010 by state and year). WSA 05-2020 v4.1 is real and sold as an eBook. ACMA's accredited-person scheme is real.
- **What was wrong:**
  - No rosters automatically push work to individuals.
  - Neither credential is "legally mandated". They're contract requirements, and ACMA accreditation is optional.
  - "QTP" and "Category B" aren't ACMA terms. The categories are General and Specific Licensing Accreditation, and the fee was $546 on the 2024 form.
  - EME safety falls under ARPANSA, not frequency assignment.
  - The income figures had no source.
  - The referee shortcut (you write it, they sign) is a risk.

Radio: realistic income

1. **Contracting on critical-comms projects:** radio, TETRA and DAMM migrations, and the shift to private LTE and 5G for mining and utilities. The best money now (est.).
2. **Subcontractor rosters** with integrators such as Radlink and CSE Crosscom.
3. **ACMA accreditation:** needs electronic engineering qualifications or experience plus supervised frequency-assignment work. About 2–4 years, with your contacts as mentors.

Pipeline: realistic income

1. **QA and auditing for asset owners:** checking contractors' CCTV reports against WSA 05.
2. **The water-industry RTO niche:** assessing NWP units.
3. **Validator for AI-CCTV companies**, and certifying in several countries' coding standards (WSA 05 plus NASSCO PACP).
4. **Production coding:** filler only. Some of it is offshored.
5. **Owning a CCTV business:** lucrative, but capital-heavy, tender-based and field work, so it doesn't fit.

Helicopter CPL funding (Parafield)

- Flight Training Adelaide lists **AVI50322, Diploma of Aviation (CPL – Helicopter)**, at up to about $101,798 full-time.
- The VET Student Loan cap is about **$96,467** ✅ (2026), plus a 20% loan fee.
- You have no HELP debt, so the full cap is available. **Out of pocket: about $7–10k** (tuition gap plus medical, headset and other extras).
- **Confirm in writing:** that FTA's helicopter course is approved for student loans, the course length and the intake dates.
- **Start condition:** RTO income has covered living costs for 2–3 months, plus a buffer.

Notes on using AI

- Use AI for drafting, mapping, validation reports, organising evidence and admin. That roughly doubles or triples throughput (est.).
- **You make every assessment and audit decision yourself.**
- Remove identifying details from student and client data before it goes into an AI tool, and follow each contract’s AI and privacy policy.

Appendix B: Outreach and LinkedIn Text

Fill in anything in [brackets]. Attach `BSBPMG536-assessment-tool.docx` to every outreach email.

Outreach email: RTOs (send to the enquiries email in rto-targets.csv)

Subject: Assessment tool development: BSB50820, BSB50120 and ICT50220 units

Hi [RTO name] team,

I develop assessment tools for Diploma-level project management, business and IT units. I can deliver mapped, ready-to-validate tools per unit, with a fast turnaround.

I'm a business analyst and solutions architect with [X] years' industry experience, including critical-infrastructure projects on major industrial sites, so I bring current workplace context to the scenarios. I'm completing my TAE40122.

I've attached a sample: a full tool for BSBPMG536 Manage project risk. It includes knowledge questions with benchmarks, a simulated project, an observed stakeholder role-play, a second-occasion project, and a full mapping matrix against the PCs, PE, KE, FS and AC.

Could you pass this to whoever manages your training and assessment resources? I'm happy to quote per unit, or to start with a single paid trial unit.

Regards, [Name] [Phone] · [Email] · ABN [number]

Outreach email: assessment-resource companies

Subject: Subject matter expert / assessment writer: project management, business and IT

Hi [Company] team,

I'm a business analyst and solutions architect with [X] years' industry experience, including critical-infrastructure projects on major industrial sites. I'd like to write or review assessment resources for you as a contractor in the BSB (project management, business, leadership) and ICT packages.

A sample tool for BSBPMG536 Manage project risk is attached: tasks, benchmarks, observation checklist and a full mapping matrix. I work per unit, turn work around quickly, and I'm completing my TAE40122.

Are you taking on contract writers or SMEs at the moment?

Regards, [Name] [Phone] · [Email] · ABN [number]

Follow-up (5 working days later, same thread)

Hi [Name/team], just following up on the sample tool I sent for BSBPMG536. I can turn around a paid trial unit within a week if that's useful. Thanks, [Name]

LinkedIn

Headline: Business Analyst & Solutions Architect | Assessment Developer: Project Management, Business & IT (BSB / ICT) | Critical Infrastructure

About: I design systems and build assessment tools.

By day I’m a business analyst and solutions architect, most recently on critical-communications projects on a major industrial site, where requirements are strict, safety logic matters, and every document has to stand up to scrutiny.

I bring that same rigour to VET assessment development. I write mapped, audit-ready assessment tools for Diploma-level project management, business and IT units, with realistic industry scenarios, clear benchmarks and complete mapping.

Available for contract assessment development, validation support and subject matter expert work with RTOs and resource developers.

Qualifications: BA · Master of Public Administration · TAE40122 (in progress)

Open to Work (recruiters only): Assessment Developer, Learning Resource Developer, Subject Matter Expert, Contract Assessor. Contract / freelance, remote.

Appendix C: Sample Assessment Tool (BSBPMG536 Manage project risk)

Unit	BSBPMG536 Manage project risk (Release 1)
Training package	BSB Business Services, Version 7.0
Qualification	BSB50820 Diploma of Project Management (core unit)
Assessment methods	Written questions · Simulated project portfolio · Stakeholder meeting role-play (observed) · Workplace or second simulated project
Version / date	Sample v1.0, prepared by [Name], [Date]
Validation status	Not yet validated. For RTO pre-use review

Part A: Assessment overview

A1. Summary of tasks

Task	Method	What the candidate submits	Indicative time
1	Written knowledge questions	Answers to 9 questions	2–3 hours
2	Simulated project: Project 1 (Northgate Mine radio network upgrade)	Risk management plan, risk register, treatment plan, monitoring update, close-out review	8–10 hours
3	Stakeholder risk workshop: role-play (part of Project 1)	Participation (observed) + meeting record + stakeholder feedback form	45–60 min
4	Project 2: workplace project, or simulated scenario (Coastal Council ERP migration)	Risk register, treatment plan, monitoring log, stakeholder feedback, lessons learned report	6–8 hours

To be assessed as competent, the candidate must complete **all four tasks to a satisfactory standard**. Tasks 2–4 meet the performance evidence requirement to *manage project risk on at least two occasions* (Project 1 and Project 2).

A2. Assessment conditions

- **Environment:** a workplace or a simulated environment that reflects real conditions. The Northgate and Coastal Council scenarios give the candidate realistic project documentation and constraints.
- **Resources supplied:** Scenario Packs A and B (Appendix 1), risk register and plan templates (Appendix 2), and a stakeholder feedback form (Appendix 3). The candidate may also use AS ISO 31000 (Risk management – Guidelines) or their organisation’s risk framework.
- **Stakeholder feedback:** must come from the people who play stakeholders in the Task 3 role-play (Project 1), and from real workplace stakeholders or role-players (Project 2). This satisfies

the assessment condition requiring *feedback from project stakeholders about how risks were managed*.
- **Assessor:** must meet the trainer and assessor credential and vocational competency requirements of the current Standards for RTOs.

A3. Candidate instructions

1. Read all instructions and the scenario packs before you start.
2. All work must be your own. Name any frameworks, standards or sources you use.
3. You may ask your assessor to clarify task instructions, but not to give you the answers.
4. If your work is unsatisfactory, you will receive feedback and **one** opportunity to resubmit each task. Further attempts are at the RTO's discretion.
5. Talk to your assessor if you need reasonable adjustment (for example, extra time, a verbal response format, or assistive technology). Adjustments change *how* you're assessed, not the standard required.
6. You can appeal any assessment decision through the RTO's complaints and appeals policy.

A4. Assessor instructions

- Use the **benchmark answers and marking criteria** in each task. Benchmarks show what's expected. Accept equivalent answers that meet the criteria.
- Record S (satisfactory) or NYS (not yet satisfactory) against every criterion. All criteria must be S for the task to be S.
- For Task 3, complete the observation checklist during or straight after the role-play. You or a trained role-player may play stakeholders.
- For Task 4 using a workplace project, check authenticity: use the third-party verification in Appendix 3, or a short verbal discussion recorded on the assessor record.
- Complete the Assessment Record (Part C) and give written feedback.

Part B: Assessment tasks

Task 1: Written knowledge questions

Instructions to candidate: Answer all questions in your own words. Suggested length is shown for each. You may refer to standards and texts, but you must name them.

Q1. Name **five** risk categories that commonly apply to projects. Give a specific example risk for each. *(Suggested: 150–250 words)*

> **Benchmark:** Any five relevant categories, each with an example that clearly fits, e.g.: - **Technical:** a new system is incompatible with legacy equipment. - **Schedule:** a long-lead component is delivered late. - **Financial/cost:** an exchange-rate movement increases import costs. - **Resource/people:** a key specialist leaves mid-project. - **Safety/WHS:** work at height during an installation. - **Environmental:** extreme weather stops site access. - **Legal/regulatory:** a licence or permit is delayed. - **Stakeholder/organisational:** the sponsor's priorities change. - **Supplier/procurement:** a subcontractor becomes insolvent. - **Security/information:** a data breach during a system migration.
>
> **Criteria:** at least five distinct categories; every example plausibly belongs to its category.

Q2. List the **key components** of a project risk management plan and briefly explain the purpose of each. *(Suggested: 200–300 words)*

> **Benchmark:** Must include at least **six**: - **Objectives and scope** of risk management. - **Roles and responsibilities** (risk owner, project manager, sponsor). - **Methodology and tools.** - **Risk criteria:** likelihood and consequence scales and a risk matrix. - **Risk appetite or tolerance thresholds.** - **Identification and analysis processes.** - **Treatment approach.** - **Monitoring and review schedule.** - **Reporting and escalation.** - **Budget or contingency** for risk. - **Communication and consultation approach.** - **The risk register** as the controlling document.
>
> **Criteria:** six or more components; each purpose is correct.

Q3. Explain the difference between a **risk control** that already exists and a **risk treatment**. Give one project example of each. *(Suggested: 100–150 words)*

> **Benchmark:** - An **existing control** is a measure already in place that changes the risk before any new action is taken. Example: an existing permit-to-work system for electrical isolation. - A **treatment** is a new action chosen to modify the risk further after analysis. Example: adding a second, independent supplier for a critical component.
>
> **Criteria:** the distinction is correct; both examples are appropriate.

Q4. Describe the **four common risk treatment strategies for threats** and **two strategies for opportunities**. *(Suggested: 150–200 words)*

> **Benchmark:** - **Threats** (four): **avoid**, **reduce or mitigate**, **transfer or share** (e.g. insurance, contract terms) and **accept or retain**. Also accept “escalate” as an additional strategy. - **Opportunities** (two): any two of **exploit**, **enhance**, **share**, **accept**.
>
> **Criteria:** four correct threat strategies and two correct opportunity strategies, each briefly explained.

Q5. Explain how **industry sector** affects risk classification. Compare how a risk might be classified in a **mining or heavy industrial** project versus an **office IT** project. *(Suggested: 150–250 words)*

> **Benchmark:** - Industries weight consequence categories differently and have different regulatory contexts. - **Mining/industrial** examples: safety consequences dominate, with fatality-potential risks often rated as critical regardless of likelihood; critical-control management applies, and environmental and licence-to-operate risks matter. - **Office IT** examples: data, privacy and service-availability consequences dominate. - **Comparison:** the same risk category, such as a power outage, may be rated catastrophic on a mine site (because safety systems fail) but moderate in an office (temporary productivity loss).
>
> **Criteria:** explains why classification varies; gives a valid comparison.

Q6. Name **two** organisational or industry-standard risk frameworks and summarise the core process each describes. *(Suggested: 150–200 words)*

> **Benchmark:** Any two of: - **AS ISO 31000:2018** (communication and consultation; scope, context and criteria; risk assessment covering identification, analysis and evaluation; treatment;

monitoring and review; recording and reporting). - **PMBOK® risk management** (plan, identify, perform qualitative analysis, perform quantitative analysis, plan responses, implement responses, monitor). - **PRINCE2® risk theme** (identify, assess, plan, implement, communicate). - **COSO ERM.** - **An organisation's enterprise risk framework**, described accurately.

Criteria: two frameworks correctly named; the core process accurately summarised.

Q7. Outline the **steps of a project risk management process** from start to close-out, including how risks are reviewed during the project. *(Suggested: 150–200 words)*

Benchmark: 1. Plan the approach and set criteria. 2. Establish context. 3. Identify risks. 4. Analyse likelihood and consequence. 5. Evaluate and prioritise. 6. Plan and implement treatments, assigning owners. 7. Monitor and review at a regular frequency (e.g. fortnightly reviews, standing agenda item, triggers). 8. Report and escalate. 9. Close out and capture lessons learned.

Criteria: a logical sequence including monitoring/review and close-out.

Q8. Explain the difference between **qualitative** and **quantitative** risk analysis. Name **two techniques of each** and say when each type is most appropriate. *(Suggested: 200–300 words)*

Benchmark: - **Qualitative** analysis rates risks on descriptive or ordinal scales. Techniques: probability/impact matrix, risk categorisation, expert judgement, Delphi, bow-tie, risk urgency assessment. - **Quantitative** analysis assigns numerical values to the effect on objectives. Techniques: expected monetary value (EMV), Monte Carlo simulation, decision tree analysis, sensitivity (tornado) analysis, schedule risk analysis. - **When to use:** qualitative for all projects and for initial prioritisation; quantitative for high-value or complex projects, or when contingency must be justified numerically.

Criteria: correct distinction; two valid techniques of each; appropriate guidance on when to use each.

Q9. A risk has a 20% probability of occurring and would cost $150,000 if it occurred. A mitigation costs $18,000 and reduces the probability to 5%. Calculate the **expected monetary value (EMV)** before and after mitigation, and state whether the mitigation is justified on cost grounds. Show your working. *(Numeracy)*

Benchmark: - EMV before = 0.20 × $150,000 = **$30,000**. - EMV after = 0.05 × $150,000 = **$7,500**. - Reduction = **$22,500**, which is more than the $18,000 cost. - **Conclusion:** justified, with a net benefit of $4,500. Also accept discussion of non-financial factors.

Criteria: both calculations correct; correct conclusion; working shown.

Task 1 marking: all nine questions must be S. Questions answered incorrectly may be followed up verbally once; record the follow-up on the assessor record.

Task 2: Project 1, Northgate Mine radio network upgrade (simulated)

Scenario summary (full pack in Appendix 1A): You are the project manager for Northgate Mining's upgrade of its site radio network, from an ageing analog system to a digital trunked system. The

project runs for 9 months on a $2.4M budget. It covers surface and underground areas, and the system carries emergency and duress communications. Stakeholders are the Operations Manager (sponsor), the Site Emergency Services Coordinator, the IT/OT Manager, the vendor's project lead, the Underground Superintendent and the Site Safety Advisor.

Instructions to candidate: using the scenario pack and templates, produce the following.

2.1 Risk management plan *(PC 1.1, 1.2, 2.1, 4.1)*

- State the risk objectives and the standards or framework you'll apply, and show how stakeholder input shaped them. Use the stakeholder interview notes in the pack.
- Describe the project risk context: internal, external, regulatory and operational.
- Define likelihood and consequence scales and a risk matrix suited to a mine site. Justify any departures from the generic matrix in the pack.
- Set out the risk review process: frequency, forums, triggers, roles and escalation.

2.2 Risk identification and register *(PC 1.3, 2.2, 2.4, 3.1)*

- Identify **at least 12 risks** across **at least 5 categories**, including **at least 2 opportunities**. Name the identification methods you used, and why they're valid and reliable for this project (e.g. document review, a review of the pack's lessons-learned log, assumptions analysis, a prompt list or checklist, expert interview notes).
- For each risk, record: cause–event–effect description, category, existing controls, likelihood, consequence, inherent rating, owner.
- Identify any risks that fall outside your delegated authority (see delegation limits in the pack) and how you'd escalate them.

2.3 Prioritisation and treatment plan *(PC 2.3, 3.2, 3.3, 3.4)*

- Prioritise the top 6 risks. Explain how priorities were agreed with the client and stakeholders. This is demonstrated in Task 3.
- For each top-6 risk, analyse **at least two treatment options**, recommend one with reasons, and record the agreed treatment, residual rating, owner, due date and cost or effort.
- Update the plan and register to show responsibilities allocated to team members.

2.4 Monitoring update *(PC 4.2, 4.3, 4.4)* Your assessor will give you **Scenario Update 1** at month 4. It contains three changed circumstances: a vendor component recall, a 6-week delay to a mine-plan change that affects underground coverage, and a newly identified interference issue with a neighbouring licensee.

- Identify how each change affects existing risks or creates new ones.
- Evaluate whether current responses are still adequate.
- Implement agreed responses: update the register, the plan and the schedule or budget implications, and write a short (one-page) risk status report to the sponsor.

2.5 Close-out review *(PC 5.1, 5.2, 5.3)* Using **Scenario Update 2** (project close data), write a risk management close-out review (800–1,200 words) that:

- evaluates how effective the risk processes and procedures were, using evidence from the register history;
- recommends improvements for future projects;
- documents the risk management issues and lessons learned in the organisation's lessons-learned template.

Task 2 marking criteria

#	The candidate has…	S/NYS
2a	Stated risk objectives and standards, showing stakeholder input (PC 1.1)	
2b	Described internal, external, regulatory and operational context (PC 1.2)	
2c	Used and justified at least two valid identification methods; ≥12 risks, ≥5 categories, ≥2 opportunities (PC 1.3)	
2d	Defined classification criteria and applied them consistently to a ranking system (PC 2.1)	
2e	Analysed risks within delegated authority and identified escalation needs (PC 2.2)	
2f	Documented analysis outcomes in the register and plan (PC 2.4)	
2g	Identified and documented existing controls (PC 3.1)	
2h	Analysed ≥2 treatment options per top-6 risk with a justified recommendation (PC 3.2)	
2i	Recorded agreed treatments with residual rating, owner, date and cost (PC 3.3)	
2j	Updated plans and allocated responsibilities (PC 3.4)	
2k	Set out a workable review process (PC 4.1)	
2l	Identified the effect of all three changed circumstances (PC 4.2)	
2m	Evaluated the adequacy of existing responses (PC 4.3)	
2n	Updated the register and plan, and produced a sponsor status report (PC 4.4)	
2o	Evaluated process effectiveness using evidence (PC 5.1)	
2p	Made practical, specific improvement recommendations (PC 5.2)	
2q	Documented issues and lessons in the template (PC 5.3)	
2r	Used quantitative or qualitative techniques appropriately, including at least one quantitative technique for a top-6 risk (PE; KE 7)	

#	The candidate has…	S/NYS
2s	Documents use the required formats and are clear, accurate and professional (FS: writing)	

Task 3: Stakeholder risk workshop (role-play, observed)

Instructions to candidate: run a 30–45 minute risk prioritisation workshop for Project 1 with 2–3 stakeholders, played by your assessor or role-players. Briefs for the stakeholders are in the assessor pack. In the workshop you must:

1. Present your draft top risks and the risk criteria.
2. Get stakeholder input and handle at least one disagreement about priority (built into the role-player briefs).
3. Agree priorities and treatment options with the "client" (the Operations Manager).
4. Confirm actions and owners.

Afterwards, submit: a meeting record (agreed priorities, decisions, actions) and the **stakeholder feedback forms** completed by the role-players (Appendix 3).

Observation checklist

#	The candidate…	S/NYS	Assessor comments
3a	Presented risks and criteria clearly using plain language (FS: oral communication)		
3b	Used active listening and questioning to confirm understanding		
3c	Sought input from each stakeholder (PC 1.1)		
3d	Managed the disagreement constructively and reached agreement (PC 2.3)		
3e	Used consultative methods to compare treatment options (PC 3.2)		
3f	Confirmed priorities, actions and owners with the client (PC 2.3, 3.4)		
3g	Worked within delegated authority and noted escalations (PC 2.2)		
3h	Produced an accurate meeting record		

#	The candidate…	S/NYS	Assessor comments
3i	Obtained completed stakeholder feedback forms (AC)		

Task 4: Project 2, second occasion of managing project risk

Choose **Option A** (a workplace project) or **Option B** (simulated). Both must cover the full cycle: identify → analyse → treat → monitor → review.

Option A: Workplace project. Use a current or recent project you managed or co-managed, lasting at least 3 months. Remove confidential information, and get your employer's approval to submit the material.

Option B: Coastal Council ERP migration. Scenario Pack B (Appendix 1B) covers a council's migration of finance and payroll from an on-premises system to a cloud ERP: a 12-month project with a $1.1M budget. Its risks include privacy, cutover, change resistance and an end-of-financial-year deadline. Scenario Update 3 is issued mid-way.

Submit:

1. Project context summary (300–500 words), including your role and delegated authority.
2. A risk register with at least 10 risks, existing controls, ratings, owners and treatments.
3. The treatment plan for the top 5 risks, with options analysis.
4. A monitoring log showing **at least two review points**, including the response to a changed circumstance (real for Option A; Scenario Update 3 for Option B).
5. **Stakeholder feedback** on how risks were managed: from at least 2 stakeholders (Option A, third-party form in Appendix 3) or from role-players (Option B).
6. A lessons-learned report (500–800 words) with recommended improvements.
7. **Option A only:** a third-party verification signed by your supervisor or project sponsor.

Task 4 marking criteria

#	The candidate has…	S/NYS
4a	Described a project of sufficient complexity, with their role and authority (PE)	
4b	Identified risks using appropriate methods, with risk objectives aligned to stakeholder input (PC 1.1–1.3)	
4c	Analysed, rated and prioritised risks in agreement with stakeholders (PC 2.1–2.4)	
4d	Documented existing controls and analysed treatment options (PC 3.1–3.2)	
4e	Implemented and recorded treatments and allocated responsibilities (PC 3.3–3.4)	

#	The candidate has…	S/NYS
4f	Reviewed risks at two or more points and responded to changed circumstances (PC 4.1–4.4)	
4g	Obtained stakeholder feedback on risk management (AC)	
4h	Evaluated outcomes and documented improvements (PC 5.1–5.3)	
4i	Option A: the third-party verification confirms authenticity	

Part C: Assessment record

Task	Attempt 1 (S/NYS, date)	Attempt 2 (S/NYS, date)	Assessor initials
1 Knowledge questions			
2 Project 1 portfolio			
3 Stakeholder workshop			
4 Project 2			
Unit outcome	☐ Competent (C) ☐ Not Yet Competent (NYC)		

Feedback to candidate: _____

Assessor declaration: I declare that I have conducted a fair, valid, reliable and flexible assessment with this candidate and have given appropriate feedback.

Assessor name / signature / date: _____

Candidate declaration: I declare that the work submitted is my own and I have been given feedback on my result.

Candidate name / signature / date: _____

Part D: Mapping matrix

D1. Elements and performance criteria

PC	Requirement (summary)	T1	T2	T3	T4
1.1	Risk objectives and standards, with stakeholder input	Q6	2.1 (2a)	3c	4b
1.2	Risk context	Q5	2.1 (2b)		4a, 4b

PC	Requirement (summary)	T1	T2	T3	T4
1.3	Valid and reliable identification methods		2.2 (2c)		4b
2.1	Classification criteria and ranking system	Q5	2.1 (2d)		4c
2.2	Analyse within delegated authority	Q8	2.2 (2e)	3g	4c
2.3	Priorities agreed with client and stakeholders		2.3	3d, 3f	4c
2.4	Document analysis in register and plan	Q2	2.2 (2f)		4c
3.1	Identify and document existing controls	Q3	2.2 (2g)		4d
3.2	Analyse treatment options consultatively	Q4	2.3 (2h)	3e	4d
3.3	Record and implement agreed treatments		2.3 (2i)		4e
3.4	Update plans and allocate responsibilities		2.3 (2j)	3f	4e
4.1	Establish risk review processes	Q7	2.1 (2k)		4f
4.2	Monitor environment and changed circumstances		2.4 (2l)		4f
4.3	Evaluate responses to change		2.4 (2m)		4f
4.4	Implement responses and modify plans		2.4 (2n)		4f
5.1	Review effectiveness of risk processes		2.5 (2o)		4h

PC	Requirement (summary)	T1	T2	T3	T4
5.2	Develop recommended improvements		2.5 (2p)		4h
5.3	Document issues and improvements		2.5 (2q)		4h

D2. Performance evidence

Requirement	Evidence
Manage project risk on at least two occasions	Occasion 1: Tasks 2 + 3 (Northgate). Occasion 2: Task 4 (workplace or Coastal Council)
Conduct effective risk management for a project of sufficient complexity	T2 (multi-stakeholder, safety-critical, $2.4M); T4 (4a)
Apply risk management techniques, strategies and tools	T2 (2c, 2d, 2h, 2r); T4 (4b–4f)

D3. Knowledge evidence

Requirement	Evidence
Project risks in a range of risk categories	T1 Q1; T2 2c
Key components of a risk management plan	T1 Q2; T2 2.1
Relevant project risk controls	T1 Q3; T2 2g
Industry sector risk classifications and contexts	T1 Q5; T2 2d
Organisational and industry-standard risk frameworks	T1 Q6; T2 2a
Risk management processes and procedures	T1 Q7; T2 2k
Qualitative and quantitative techniques	T1 Q8, Q9; T2 2r

D4. Foundation skills

Skill	Evidence
Reading	T2 (interpreting the scenario pack, standards, delegations); T4
Writing	T2 2s; T2 2.5; T4 6
Oral communication	T3 3a, 3b
Numeracy	T1 Q9; T2 2d, 2r
Self-management	T2 2e (delegated authority); T3 3g
Teamwork	T3 3c–3f; T2 2n (sponsor report)
Planning and organising	T2 2.1–2.4; T4 4f

D5. Assessment conditions

Condition	How it’s met
Workplace or simulated environment typical of industry	Realistic scenario packs (T2, T4-B) or workplace project (T4-A)
Access to workplace documentation and resources	Scenario packs and templates (Appendices 1–2), or the workplace’s own documents
Feedback from project stakeholders on how risks were managed	T3 feedback forms (3i); T4 item 5 (4g)
Assessor requirements	Part A2

Appendices (outline; full versions supplied with the RTO pack)

Appendix 1A: Scenario Pack A, Northgate Mine radio network upgrade. Company profile, project charter, scope, schedule, budget, delegation limits, generic 5×5 risk matrix, stakeholder interview notes (6), lessons-learned log from a previous site project, Scenario Update 1 (month 4), Scenario Update 2 (close-out data).

Appendix 1B: Scenario Pack B, Coastal Council ERP migration. Council profile, business case extract, project plan, privacy obligations summary, stakeholder notes, Scenario Update 3.

Appendix 2: Templates. Risk management plan, risk register (Excel), treatment options analysis, risk status report, lessons-learned template.

Appendix 3: Forms. Stakeholder feedback form (role-play and workplace versions), third-party verification form.

Assessor pack (separate, not given to candidates). Role-player briefs for Task 3, including the scripted disagreement. Benchmark risk register for Northgate. Expected impacts for Scenario Updates 1–3.

Sample prepared to demonstrate assessment-development capability. Mapped against BSBPMG536 Release 1 as published on training.gov.au. Requires RTO validation before use.
